DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 - 14, drawn to a sorbent cartridge, classified in class 96, subclass 295.
- II. Claim 15, drawn to an apparatus for chemical analysis of fluid samples, classified in class 422, subclass 101.
- III. Claims 16 - 32, drawn to a method of making and using a sorbent cartridge, classified in class 436, subclass 178.

2. The inventions are distinct, each from the other because of the following reasons:

a). Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a filter device for purification or adsorption of a targeted substance, as well as for sample preparation of a chemical analysis kit. See MPEP § 806.05(d).

b). Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case, the product can be used in a materially different process, such as a filtering device or as an adsorbent of a filtering system, which does not require any suction.

c). Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case, the process for using the product can be practiced with another materially different product, such as instead of using a pipette, similar analytical equipment may be used in its place, such as a network of tubing (pipes or test tubes) connected to a suction source and the porous barrier with the sorbent within a portion of the volume of the tubing.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and search for one group is not required for another group, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marianne S. Ocampo whose telephone number is (703) 305-

1039. The examiner can normally be reached on Mondays to Fridays from 8:00 A.M. to 4:30 P.M..

6. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda Walker can be reached on (703) 308-0457. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

7. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
